

Ubbink Vent Components - Concentric Non-Condensing

- For concentric venting, non-condensing models.
- Concentric venting incorporates a condensate collector and does not require an “adapter” vent component.
- Plastic vent components consist of an outer plastic vent for the air intake and an inner metal vent for the exhaust gases. Metal vent components consist of metal inner and outer vents.
- Plastic and metal vent components are completely interchangeable.

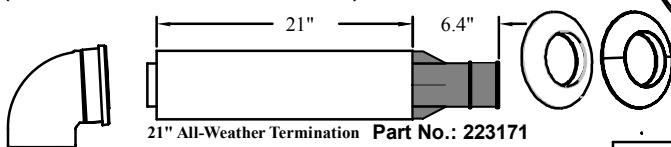

Refer to the Rinnai installation manual and the Ubbink installation instructions for complete installation details and requirements.

Rinnai is continually updating and improving products; therefore, specifications are subject to change without prior notice. Local, state, provincial and federal codes must be adhered to prior to installation.
